Two basic data types: Boolean, integer

Hilbert spaces denoted by Boolean and integer:

 $\mathcal{H}_{\text{Boolean}} = \mathcal{H}_2,$ $\mathcal{H}_{\text{integer}} = \mathcal{H}_{\infty}.$

Space l_2 of square summable sequences

$$\mathcal{H}_{\infty} = \{\sum_{n=-\infty}^{\infty} \alpha_n | n \rangle : \alpha_n \in \mathbb{C} \text{ for all } n \in \mathbb{Z} \text{ and } \sum_{n=-\infty}^{\infty} |\alpha_n|^2 < \infty \},$$

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● ● ● ●

where \mathbb{Z} is the set of integers.

A quantum register is a finite sequence of distinct quantum variables.

State space of a quantum register $\overline{q} = q_1, ..., q_n$:

$$\mathcal{H}_{\overline{q}} = \bigotimes_{i=1}^n \mathcal{H}_{q_i}.$$

(ロト・日本)・モン・モン・モー のへの

Quantum extension of classical while-programs:

$$S ::= \mathbf{skip} \mid q := 0 \mid \overline{q} := U\overline{q} \mid S_1; S_2 \mid \mathbf{measure} \ M[\overline{q}] : \overline{S} \\ \mid \mathbf{while} \ M[\overline{q}] = 1 \ \mathbf{do} \ S$$

Soundness Theorem for PD

Proof system *PD* is *sound* for partial correctness of quantum programs.

► For any quantum program *S* and quantum predicates $P, Q \in \mathcal{P}(\mathcal{H}_{all})$, we have:

 $\vdash_{PD} \{P\}S\{Q\} \text{ implies } \models_{\text{par}} \{P\}S\{Q\}.$

Completeness Theorem for PD

Proof system *PD* is *complete* for partial correctness of quantum programs.

► For any quantum program *S* and quantum predicates $P, Q \in \mathcal{P}(\mathcal{H}_{all})$, we have:

 $\models_{\text{par}} \{P\}S\{Q\} \text{ implies } \vdash_{PD} \{P\}S\{Q\}.$

Let $P \in \mathcal{P}(\mathcal{H}_{all})$ and $\epsilon > 0$. A function

 $t: \mathcal{D}^{-}(\mathcal{H}_{all}) \to \mathbb{N}$

is called a (P, ϵ) -bound function of quantum loop:

while $M[\overline{q}] = 1$ do S

if:

1. $t([S](M_1\rho M_1^{\dagger})) \le t(\rho);$

for all $\rho \in \mathcal{D}^{-}(\mathcal{H}_{all})$.

Let $P \in \mathcal{P}(\mathcal{H}_{all})$ and $\epsilon > 0$. A function

 $t: \mathcal{D}^{-}(\mathcal{H}_{all}) \to \mathbb{N}$

is called a (P, ϵ) -bound function of quantum loop:

while $M[\overline{q}] = 1$ do S

if:

1.
$$t([S](M_1\rho M_1^{\dagger})) \le t(\rho);$$

2. $tr(P\rho) \ge \epsilon$ implies $t(\llbracket S \rrbracket(M_1\rho M_1^{\dagger})) < t(\rho)$ for all $\rho \in \mathcal{D}^-(\mathcal{H}_{all})$.

 $\begin{array}{l} \mbox{Proof System } TD = (\mbox{Proof System } PD - \mbox{Rule Loop Partial}) \\ & + \mbox{Rule Loop Total} \end{array}$

Proof System TD = (Proof System PD - Rule Loop Partial) + Rule Loop Total

Rule: Total Correctness for Loop

 $(1) \{Q\}S\{M_0^{\dagger}PM_0 + M_1^{\dagger}QM_1\}$ $(2) \text{ for any } \epsilon > 0, \ t_{\epsilon} \text{ is a } (M_1^{\dagger}QM_1, \epsilon) - \text{ bound}$ $(Rule \text{ Loop Total}) \quad \frac{\text{function of loop while } M[\bar{q}] = 1 \text{ do } S}{\{M_0^{\dagger}PM_0 + M_1^{\dagger}QM_1\}\text{ while } M[\bar{q}] = 1 \text{ do } S\{P\}}$

Soundness Theorem for TD

Proof system *TD* is sound for total correctness of quantum programs.

▶ For any quantum program *S* and quantum predicates $P, Q \in \mathcal{P}(\mathcal{H}_{all})$, we have:

 $\vdash_{TD} \{P\}S\{Q\} \text{ implies } \models_{\text{tot}} \{P\}S\{Q\}.$

Completeness Theorem

The proof system *TD* is complete for total correctness of quantum programs.

► For any quantum program *S* and quantum predicates $P, Q \in \mathcal{P}(\mathcal{H}_{all})$, we have:

 $\models_{\text{tot}} \{P\}S\{Q\} \text{ implies } \vdash_{TD} \{P\}S\{Q\}.$

Proof Outline

► Claim: $\vdash_{PD} \{wlp.S.Q\}S\{Q\}$ for any quantum program *S* and quantum predicate $P \in \mathcal{P}(\mathcal{H}_{all})$.

Induction on the structure of *S*.

wp.**while**.
$$Q = M_0^{\dagger}QM_0 + M_1^{\dagger}(wp.S.(wp.while.Q))M_1$$
.

Our aim is to derive:

 $\{M_0^{\dagger}QM_0 + M_1^{\dagger}(wp.S.(wp.\mathbf{while}.Q))M_1\}$ while $\{Q\}$.

Proof Outline

► Claim: $\vdash_{PD} \{wlp.S.Q\}S\{Q\}$ for any quantum program *S* and quantum predicate $P \in \mathcal{P}(\mathcal{H}_{all})$.

Induction on the structure of *S*.

• Example case: S =while $M[\bar{q}] = 1$ do S'.

$$wp.$$
while. $Q = M_0^{\dagger}QM_0 + M_1^{\dagger}(wp.S.(wp.$ while. $Q))M_1.$

Our aim is to derive:

 $\{M_0^{\dagger}QM_0 + M_1^{\dagger}(wp.S.(wp.while.Q))M_1\}$ while $\{Q\}$.

► Induction hypothesis on *S*':

 $\{wp.S'.(wp.while.Q)\}S\{wp.while.Q\}.$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ∽ � ♥

► Induction hypothesis on *S*′:

 $\{wp.S'.(wp.while.Q)\}S\{wp.while.Q\}.$

► Rule Loop Total: It suffices to show that for any ε > 0, there exists a (M⁺₁(wp.S'. (wp.S.Q))M₁, ε)-bound function of quantum loop while.

► Induction hypothesis on *S*′:

```
\{wp.S'.(wp.while.Q)\}S\{wp.while.Q\}.
```

- ► Rule Loop Total: It suffices to show that for any ε > 0, there exists a (M[†]₁(wp.S'. (wp.S.Q))M₁, ε)−bound function of quantum loop while.
- Bound Function Lemma: We only need to prove:

 $\lim_{n\to\infty} tr(M_1^{\dagger}(wp.S'.(wp.\mathbf{while}.Q))M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)) = 0.$

We observe:

$$\begin{split} tr(M_1^{\dagger}(wp.S'.(wp.\mathbf{while}.Q))M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)) \\ &= tr(wp.S'.(wp.\mathbf{while}.Q)M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)M_1^{\dagger}) \\ &= tr(wp.\mathbf{while}.Q\llbracket S' \rrbracket (M_1(\llbracket S' \rrbracket \circ \mathcal{E}_1)^n(\rho)M_1^{\dagger})) \\ &= tr(wp.\mathbf{while}.Q(\llbracket S' \rrbracket \circ \mathcal{E}_1)^{n+1}(\rho)) \\ &= tr(Q\llbracket \mathbf{while} \rrbracket (\llbracket S' \rrbracket \circ \mathcal{E}_1)^{n+1}(\rho)) \\ &= \sum_{k=n+1}^{\infty} tr(Q[\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)). \end{split}$$

We consider the infinite series of nonnegative real numbers:

$$\sum_{n=0}^{\infty} tr(Q[\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)) = tr(Q\sum_{n=0}^{\infty} [\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)).$$

Since $Q \sqsubseteq I_{\mathcal{H}_{all}}$, it follows that

$$tr(Q\sum_{n=0}^{\infty} [\mathcal{E}_0 \circ (\llbracket S' \rrbracket \circ \mathcal{E}_1)^k](\rho)) = tr(Q\llbracket \mathbf{while} \rrbracket(\rho))$$
$$\leq tr(\llbracket \mathbf{while} \rrbracket(\rho)) \leq tr(\rho) \leq 1.$$
